| \$100B PRIVATE | [1] | \$12.5B PUBLIC | [2] [6] [9] | 9,000 DIRECT JOBS | [1] | ~50,000 TOTAL | [2] | 232 MI |
|----------------|-----|----------------|-------------|-------------------|-----|---------------|-----|--------|

- I. The plan (01-05) – what was promised, drawn from the record
- II. The measured reality (06-11) – what BLS, Census, and USAspending show today
- III. The record – every source

# Five nodes between Buffalo and Albany.

A fabrication corridor is being assembled along I-90: a \$100B<sup>[1]</sup> megafab at Clay, the country's EUV research center at Albany<sup>[9]</sup>, and the talent infrastructure between them. Scrub the timeline.

|                                                       |                                                                                                                    |

THAT IS THE GEOGRAPHY. 02 PLOTS THE PROMISE AGAINST TIME →

# Two decades of construction, then operations.

Four series from the cited anchors: cumulative capital at Clay, the construction workforce band, Micron permanent jobs, and the indirect base that forms around them.

9,000 DIRECT<sup>[1]</sup>

+

~41,000 SUPPLY & INDUCED<sup>[2]</sup>

=

THE CITED ~50,000<sup>[2]</sup>

THOSE CURVES ARE THE PLAN'S ARITHMETIC. 03 FOLLOWS THE CAPITAL →

# Who pays for the corridor.

Drawn to scale from the cited commitments: Micron's private capital, New York's Green CHIPS package, federal CHIPS direct funding, and federal R&D money at Albany. For scale: up to \$100B<sup>[1]</sup> is eighteen times the state's entire \$5.5B Green CHIPS package<sup>[2]</sup>.

# How people reach the cleanroom.

The cited programs link the corridor's schools to its employers — co-ops, certificates, cleanroom training, and retraining routes from Rochester, Syracuse, and the Finger Lakes into the fabs.

THE LATTICE EXISTS ON PAPER. 06 MEASURES WHO IS ACTUALLY MOVING THROUGH IT →

# The corridor did not start empty.

New York's installed semiconductor base, by the state's own count, and the teaching hardware already running at RIT.

THAT WAS THE STARTING INVENTORY. WHAT FOLLOWS IS THE METER →

## PART TWO — THE MEASURED REALITY

Sections 01–05 drew the promise from announcements, agreements, and the environmental record. From here, every number is a measurement from a public statistical agency — and some of the most important ones are missing. The absences render too.

# Semiconductor employment today: hundreds, not thousands.

The measured baseline, refreshed from BLS and IPEDS: county semiconductor employment where the agencies publish it<sup>[30]</sup>, and suppression where they don't.

THAT IS THE MONEY TRAIL. 09 COMPARES THE OTHER CORRIDORS →

# Five ramps, measured the same way.

Each strip starts at its project's public announcement: county semiconductor employment, monthly, on a common clock.

SAME RACE, DIFFERENT COUNTIES. 10 CHECKS THE REGION'S ABSORPTION →

# Housing starts and the education mix.

Building permits show whether the housing pipeline is responding; attainment shows the region's starting workforce mix.

# Power and water, drawn to scale.

A megafab is a physical machine. The plate lays its planned draw against the grid zone's measured load and the water system's permitted capacity.

THE PHYSICAL INPUTS ARE FINITE. 12 RENDERS THE VERDICTS →

# The verdicts, stamped.

Five lines, each linking back to the plate that earns it. This is what the record supports today — nothing more.

## What to watch next

- 3,000-4,000 construction workers, 2027<sup>[14]</sup> → watch the quarterly QCEW refreshes<sup>[30]</sup>
- Fab 1 operations, 2030<sup>[13]</sup> → watch Onondaga NAICS-3344 employment<sup>[30]</sup>
- A Micron award record appearing on USAspending<sup>[34]</sup> → the ledger's absence inverts; this tracker checks daily

FIRST, WHAT THE RECORD DOESN'T SAY →

# What the record doesn't say (yet).

- The construction ramp-down after 2041 is illustrative — no cited figure describes how the workforce winds down.
- The talent lattice's ribbon widths are illustrative; only its structure — who feeds whom — is cited.
- No NYISO document publishes a full-buildout megawatt figure; the cited interconnection requests stop at Fab 2<sup>[24]</sup>.
- Commerce has published no award record for the Micron funding agreements<sup>[34]</sup> — the ledger renders the absence.
- QCEW counts every NAICS-3344 employer in a county, not Micron headcount<sup>[30]</sup> — the plan series and the measured series answer different questions.
- OEWS publishes no semiconductor-technician wage for either corridor metro<sup>[31]</sup> — the occupation the buildout most needs is the one the survey can't yet see here.

NOW THE RECORD ITSELF →

# Every number, sourced.
